

Course: Network+ (N10-009)

Contact Hours: 36

Prerequisite: Computer Literacy

Abstract

This course covers network technologies, installation and configuration, media and topologies, management and security.

Target Audience

- Network Administrator
- Network Technician
- Network Installer
- Help Desk Technician
- IT Cable Installer

Learning Outcomes

On completion of this course, learners will be able to:

- 1. Explain the characteristics of the OSI model layers and encapsulation concepts
- 2. Explain the characteristics of network topologies and network types
- 3. List and describe network media and hardware components
- 4. Identify and use different IP addressing schemes
- 5. Explain the use and purpose of common ports, protocols and network services
- 6. Configure and deploy common Ethernet switching features
- 7. Install and configure wireless standards and technologies
- 8. Summarize cloud concepts and connectivity options
- 9. Compare and contrast routing technologies
- 10. Compare and contrast various devices and their appropriate placement on the network
- 11. Identify the appropriate statistics and sensors to ensure network availability
- 12. Explain the purpose of organizational documents and policies
- 13. Explain high availability and disaster recovery concepts
- 14. Explain common security concepts and common types of attacks
- 15. Given a scenario apply appropriate network hardening techniques

Course Content

1. Networking Concepts

- OSI model layers, devices & appliances, cloud architecture
- Common ports/protocols, transmission media
- IP addressing, routing, evolving network technologies

2. Network Implementation

- Wired and wireless technologies
- Switching and routing configuration
- Physical installations and environmental concerns

3. Network Operations

- Documentation practices
- Monitoring methods and disaster recovery
- Service configuration and management interfaces

4. Network Security

- Logical and physical security
- Attack types (e.g., DoS, spoofing, social engineering)
- Hardening techniques and access control

5. Network Troubleshooting

- Structured troubleshooting methodology
- Cable/interface issues, performance bottlenecks
- Tools: CLI commands, protocol analyzers, testers

Assessment Criteria

In order to achieve Learning Outcome	The Learner must
1. Identify the basic components of	Describe topology
network theory	Define Networks
	Characterize network components
Identify the major network communications methods	Define Wired vs wireless communication
3. Identify network data delivery	Describe the OSI model
methods	Describe TCP\IP Protocol Stack
	Define Packets and Frames
	Describe Local vs Remote communication
4. List and describe network media and	Identify UTP, STP, Coax, Fiber Optic cables
hardware components	Identify hubs, switches, routers, firewalls etc
5. Identify the major types of network	Define Ethernet, Active Directory domains and
implementations	workgroups
6. Identify the components of a TCP/IP	Describe IPv4 and IPv6
network implementation	Perform IPv4 subnetting
7. Identify the major services deployed on TCP/IP networks	Describe DHCP and DNS
8. Identify the components of a LAN	Define connectivity devices
implementation	Understand routing basics
	Identify Routing protocols
9. Identify the components of a WAN	Identify WAN connectivity methods
implementation	Identify WAN technologies
	Identify WAN topology
	Identify Unified communication
10. Identify major issues and technologies	Describe firewalls
in network security	Describe Intrusion Detection
	Describe physical security
11. Identify the components of a remote network implementation	Define and identify types of VPNs
12. Identify major issues and technologies	Define Hot vs Cold Sites
in disaster recovery	Describe data recovery options
13. Identify major data storage	Describe a NAS
technologies and implementations	Describe cloud storage options
14. Identify the primary network	Identify Server OS
operating systems	Differentiate Server vs Client OS
15. Identify major issues, models, tools,	Use cable tester
and techniques in network	Use network monitoring software
troubleshooting	Identify the uses of protocol analyzers and other
	tools
	Describe and use troubleshooting methodology
ı .	, 5 67
